Contents

I	Classical and Semiclassical Light–Matter Interactions	15
1	Classical Atom–Field Interactions	17
1.1	Polarizability	17
1.1.1	Connection to Dielectric Media	19
1.2	Damping: Lorentz Model	19
1.2.1	Oscillator Strength	21
1.3	Dipole Radiation	22
1.3.1	Damping Coefficient	24
1.4	Atom Optics: Mechanical Effects of Light on Atoms	25
1.4.1	Dipole Force	25
1.4.1.1	Dipole Potential: Standard Form	27
1.4.1.2	Photon Scattering Rate	28
1.4.1.3	Optical Theorem	30
1.4.1.4	Scaling	31
1.4.2	Radiation Pressure	31
1.4.3	Laser Cooling: Optical Molasses	32
1.4.3.1	Doppler Cooling Limit	33
1.4.3.2	Magneto-Optical Trap	35
1.5	Cooperative Radiation	36
1.5.1	Atom–Mirror Interaction	36
1.5.2	Two-Atom Radiation	39
Appendix 1.A	Random Walks, Diffusion, and the Central Limit Theorem	42
1.A.1	Two-Step Distribution	43
1.A.2	Convolution Theorem	44
1.A.3	Example: Convolution of Two Gaussians	44
1.A.4	Proof of the Central Limit Theorem	45
1.6	Exercises	47
2	Classical Coherence	53
2.1	Wiener–Khinchin Theorem	54
2.2	Optical Wiener–Khinchin Theorem	55
2.2.1	Michelson Interferometer	56
2.2.2	Example: Monochromatic Light	57
2.2.3	Spectrum of Atomic Radiation	57
2.3	Visibility	58
2.4	Coherence Time, Coherence Length, and Uncertainty Measures	58
2.5	Interference Between Two Partially Coherent Sources	60
2.6	Second-Order Coherence	61
2.6.1	Thermal Light	62
2.6.2	Experiment of Hanbury Brown and Twiss	63
2.7	Exercises	65

3	Rate-Equation Model	67
3.1	Quantization	67
3.2	Fundamental Light–Atom Interactions	68
3.3	Einstein Rate Equations	68
3.4	Relations Between the Einstein Coefficients	69
3.5	Line Shape and Spectral Distributions	70
3.5.1	Broadband Light	71
3.5.2	Nearly Monochromatic Light	71
3.6	Absorption Coefficient and Saturation	72
3.7	Exercises	74
4	The Quantum State	77
4.1	Density Operator	77
4.1.1	Expectation Values	78
4.1.2	The Density Matrix	79
4.1.3	Purity	79
4.2	Pictures	80
4.2.1	Unitary Time-Evolution Operator	80
4.2.1.1	Infinitesimal Form	80
4.2.1.2	Differential Equation for the Evolution Operator	81
4.2.1.3	General Form	81
4.2.2	Schrödinger vs. Heisenberg Picture	82
4.2.2.1	Heisenberg Equation of Motion	83
4.2.3	Interaction Picture	83
4.3	Wigner Distribution	84
4.3.1	Marginal Distributions	85
4.3.2	Overlap	86
4.3.3	Area	87
4.3.4	Sample Wigner Distributions	87
4.3.4.1	Gaussian State	87
4.3.4.2	Coherent Superpositions	89
4.3.4.3	Harmonic Oscillator States	90
4.3.5	Weyl Correspondence and Operator Ordering	92
4.3.5.1	Weyl’s Rule	92
4.3.5.2	Expectation Values	93
4.3.5.3	Weyl Correspondence: Inverse Form	94
4.3.5.4	Weyl Ordering	94
4.3.6	Operator Products and Commutators	95
4.3.7	Moyal Bracket	96
4.3.8	Summary: Defining Properties	97
4.3.9	Other Representations	98
4.3.9.1	Husimi or Q Function	98
4.3.9.2	P Function	99
4.3.9.3	Standard-Ordered Distribution	99
4.3.9.4	Antistandard-Ordered Distribution	99
4.4	Multiple Degrees of Freedom	99
4.4.1	Merging Hilbert Spaces	99
4.4.2	Entanglement	100
4.4.2.1	Cloning	101
4.4.3	Peres–Horodecki Criterion	101
4.4.3.1	Wigner Representation	103
4.4.3.2	Generalized Uncertainty Relation	104
4.4.3.3	Sufficiency for Gaussian States	107

4.4.4	Indistinguishability	110
4.4.4.1	Exchange “Force”	110
4.4.5	Open Systems: Church of the Larger Hilbert Space	113
4.5	Exercises	115
5	Two-Level Atom Interacting with a Classical Field	117
5.1	Atom–Field Interaction	117
5.1.1	Parity and the Dipole Operator	118
5.1.2	Rotating-Wave Approximation	119
5.1.3	Rabi Frequency	120
5.1.4	Schrödinger Equation	120
5.1.5	Rotating Frame	120
5.1.5.1	Unitary Transformations	121
5.1.5.2	Digression: Field Operators	122
5.2	Rabi Flopping	123
5.2.1	Resonant Interaction	123
5.2.1.1	Example: Initially Unexcited Atom	124
5.2.2	Nearly Resonant Interaction	125
5.2.2.1	Example: Initially Unexcited Atom	126
5.3	Dressed States	127
5.3.1	Rabi Oscillations in the Dressed-State Picture	128
5.3.2	Adiabatic Passage and Landau–Zener Crossings	129
5.4	Bloch Sphere	132
5.4.1	Atomic Timekeeping and Ramsey Fringes	137
5.4.2	Spin Echoes and Photon Echoes	140
5.4.3	Adiabatic Following	143
5.5	Optical Bloch Equations	143
5.5.1	Steady State	145
5.5.2	Damped Rabi Oscillations	146
5.5.2.1	Laplace Transform	146
5.5.2.2	Torrey’s Solutions	147
5.5.2.3	Exact Resonance	149
5.5.3	Operator Form	151
5.5.4	Orders of Magnitude	151
5.6	Consistency with Other Models	152
5.6.1	Classical Limit	152
5.6.1.1	Review: Harmonic Oscillator in Quantum Mechanics	152
5.6.1.2	Evolution of the Means: Damped Quantum Harmonic Oscillator	153
5.6.1.3	Evolution of the Variances	155
5.6.2	Rate-Equation Limit	157
5.6.2.1	Saturation Intensity	158
5.6.2.2	Validity of the Rate-Equation Limit	160
5.7	Spectrum of Resonance Fluorescence	160
5.7.1	Scattering Cross Section, Line Shape, and Power Broadening	161
5.7.2	Coherent and Incoherent Scattering	163
5.7.3	Quantum Regression Theorem	165
5.7.3.1	Alternate Form	167
5.7.4	Mollow Triplet	167
5.7.4.1	Off Resonance	171
5.7.4.2	Interpretations	172
5.7.4.3	Energy Conservation	173
5.7.4.4	Nonclassical Correlations	174
5.7.5	Antibunching of Resonance Fluorescence	175

5.7.6	Probe Absorption	177
5.7.6.1	Autler–Townes Doublet	183
5.7.6.2	Lamb Dip	187
5.8	Mechanical Effects of Light on Two-Level Atoms	195
5.8.1	Atom-Field Interaction	195
5.8.2	Schrödinger Equation	196
5.8.3	Adiabatic Approximation	197
5.8.3.1	Master Equation Approach	197
5.8.3.2	Bragg Scattering in an Optical Standing Wave	199
5.8.4	Nonperturbative Analysis	202
5.8.5	Dressed-State Interpretation	205
5.8.6	Fluctuations of the Optical Force	205
5.8.6.1	Fokker–Planck Equation	206
5.8.6.2	Diffusion Coefficient	207
5.8.6.3	Quantum Regression Theorem	208
5.8.6.4	Interpretation of the Diffusion Rate	210
5.8.6.5	Dressed-State Model	211
5.8.6.6	Examples: Plane and Standing Waves	212
5.8.6.7	Spontaneous Emission	213
5.8.7	Velocity Dependence	214
5.8.8	Doppler Cooling Limit	217
5.9	Bloch–Siegert Shift	218
5.9.1	Magic Wavelength	219
5.10	Exercises	221
6	Three-Level Atom Interacting with a Classical Field	235
6.1	Stimulated Raman Transitions	235
6.1.1	Effective Two-Level Dynamics	237
6.1.1.1	Cross-Couplings	239
6.1.2	Spontaneous Emission	239
6.1.3	Multiple Excited States	239
6.1.4	Velocity Selectivity	240
6.1.5	Pulse-Shape Considerations	241
6.1.5.1	Square Pulse	241
6.1.5.2	Blackman Pulse	243
6.1.6	Stimulated Raman Cooling	244
6.1.6.1	Free Space	244
6.1.6.2	Resolved-Sideband Raman Cooling	246
6.1.7	Atom Interferometry	247
6.2	Coherent Population Trapping	249
6.2.1	VSCPT	252
6.2.2	Electromagnetically Induced Transparency	253
6.2.3	Stimulated Raman Adiabatic Passage	256
6.2.4	Quantum Beats	256
6.2.4.1	Master Equations and Quantum Beats	257
6.2.4.2	Steady-State Quantum Beats	258
6.3	Exercises	261
7	Atomic Angular-Momentum Structure	265
7.1	Angular Momentum	265
7.1.1	Operators and Eigenstates	265
7.1.2	Ladder Operators and Eigenvalues	266
7.1.3	Addition of Two Angular Momenta: Clebsch–Gordan Coefficients	268

7.1.3.1	Basis States	268
7.1.3.2	Transformation between Bases and Clebsch–Gordan Coefficients	268
7.1.3.3	Calculation of Clebsch–Gordan Coefficients	270
7.1.3.4	Explicit Formula	270
7.1.3.5	Symmetry Relations and Wigner 3- j Symbols	271
7.1.4	Addition of Three Angular Momenta: Wigner 6- j Symbols	273
7.1.5	Fine Structure	274
7.1.6	Hyperfine Structure	274
7.2	Rotations and Irreducible Tensor Operators	275
7.2.1	Rotation Operator	275
7.2.2	Rotation Matrix	276
7.2.3	Irreducible Tensor Operators	276
7.2.3.1	Commutation Rules	276
7.2.3.2	Spherical Basis	277
7.2.4	Wigner–Eckart Theorem	278
7.2.4.1	Dipole Operator	279
7.2.4.2	Fine-Structure Selection Rules	279
7.2.5	Hermitian Conjugates of Tensor Operators	280
7.2.5.1	Conjugates of Reduced Matrix Elements	281
7.2.6	Decomposition of Reduced Matrix Elements	281
7.2.6.1	Hyperfine Selection Rules	282
7.3	Field Interactions with Atomic Angular-Momentum States	282
7.3.1	Atomic Fine-Structure Hamiltonian	282
7.3.2	Dipole and Atomic Lowering Operators	283
7.3.3	Dipole Interaction	284
7.3.3.1	Magnetic-Sublevel Transitions: Notation	285
7.3.4	Dipole Interaction: Hyperfine Structure	286
7.3.4.1	Atomic Hyperfine Hamiltonian	286
7.3.4.2	Atom–Field Interaction	287
7.4	Angular Distribution of Dipolar Resonance Fluorescence	288
7.4.1	Angular-Distribution Tensor	290
7.4.2	Spectral Tensor and Total Scattered Power	291
7.4.2.1	Hyperfine Structure and Interference	292
7.5	Atomic Master Equation	292
7.5.1	Fine Structure	292
7.5.2	Hyperfine Structure	294
7.6	Exercises	295

II Quantum Light–Matter Interactions

297

8 Quantization of the Electromagnetic Field

299

8.1	Classical Electromagnetic Field	299
8.2	Hamiltonian Structure of the Classical Electromagnetic Field	300
8.2.1	Variational Calculus	300
8.2.2	Action Principles	301
8.2.2.1	Lagrangian	301
8.2.2.2	Hamiltonian	301
8.2.3	Electromagnetic Lagrangian and Hamiltonian	302
8.2.3.1	Electromagnetic Functional Derivatives	303
8.3	Quantization of a Single Field Mode	304
8.4	Quantization of Many Modes	306
8.4.1	Example: Quantization in a Perfectly Conducting Box	307

8.4.2	Example: Quantization in Free Space	307
8.4.3	Example: Quantization in Half Space	308
8.4.4	Example: Quantization in a Spherical Cavity	309
8.4.4.1	Scalar Field	309
8.4.4.2	Vector Field	312
8.4.4.3	Asymptotics	315
8.4.4.4	Vector Multipole Modes	316
8.5	Transverse and Longitudinal Fields	318
8.5.1	Helmholtz Theorem	318
8.5.2	Coulomb Gauge	320
8.5.3	Transverse and Longitudinal Delta Functions	320
8.5.3.1	Momentum Representation	320
8.5.3.2	Position Representation	321
8.6	Field Commutators	322
8.6.1	Free-Space Commutators	323
8.6.1.1	Direction Cosines	323
8.6.1.2	Evaluation	323
8.6.1.3	Equal-Time Commutators in Free Space	325
8.6.2	Half-Space Commutators	326
8.7	Unconfined Mode Functions	328
8.8	Exercises	330
9	Atomic Interaction with the Quantized Field	333
9.1	Lorentz Force	333
9.1.1	Lagrangian	334
9.1.2	Hamiltonian	334
9.2	Quantization and Minimal Coupling	334
9.3	Dipole Interaction	336
9.3.1	Power-Zienau Transformation	336
9.3.1.1	Electric Displacement	338
9.3.1.2	Active and Passive Viewpoints	338
9.3.1.3	Göppert-Mayer Transformation	338
9.3.2	$\mathbf{p} \cdot \mathbf{A}$ vs. $\mathbf{r} \cdot \mathbf{E}$	339
9.4	Why the Vector Potential?	340
9.5	Multipole Interactions	343
9.5.1	Atomic Polarization Field	343
9.5.2	Atomic Magnetization Field	344
9.5.3	Power-Zienau Transformation	345
9.5.3.1	Electric Field	345
9.5.3.2	Canonical Electron Momentum	346
9.5.3.3	Hamiltonian	347
9.5.4	Electric Multipole Expansion	348
9.5.5	Magnetic Multipole Expansion	349
9.6	Center-of-Mass Röntgen Interaction	350
9.6.1	Polarization	350
9.6.2	Center-of-Mass Coordinates	351
9.6.3	Transformation: Electric Dipole Approximation	352
9.6.4	Full Transformation	354
9.6.4.1	Effecting the General Transformation	354
9.6.4.2	Final Result	356
9.7	Exercises	358
10	Cavity QED and the Jaynes-Cummings Model	361

10.1	Single Cavity Mode	361
10.2	Dynamics	362
10.3	Dressed States and the Vacuum Rabi Doublet	365
10.3.1	Photon Blockade	365
10.3.2	Atom-Photon “Molecule”	366
10.4	Refinements of the Model	367
10.5	Exercises	368
11	Spontaneous Emission	371
11.1	Atom–Field Coupling	371
11.2	Evolution	372
11.3	Large-Box Limit	373
11.4	Decay Rate	374
11.5	Degeneracy	374
11.6	Master Equation for Spontaneous Emission	375
11.7	Fermi’s Golden Rule	376
11.7.1	Free-Space Decay Rate	378
11.8	Corrections to Exponential Decay	379
11.8.1	Short Times	379
11.8.1.1	Quantum Zeno Effect	381
11.8.2	Long Times	381
11.9	Exercises	383
12	Coupled-Mode Theory for Cavity QED	385
12.1	Classical Field in a Single Cavity	385
12.2	Classical Coupled Modes of Two Cavities	386
12.3	Quantization of the Coupled Modes	387
12.4	Cavity Driven by a Classical Field	389
12.4.1	Cavity Decay Rate	389
12.5	Cavity Decay	390
12.5.1	Master Equation	392
13	Mechanical Effects of the Quantum Vacuum	393
13.1	Setup	393
13.2	Atom–Vacuum Interaction	394
13.3	Renormalization	396
13.4	Large-Box Limit	396
13.5	Spherical Coordinates	397
13.5.1	Thomas–Reiche–Kuhn Sum Rule	399
13.5.2	Simplification	400
13.5.3	Spherical Symmetry	400
13.6	Asymptotic Behavior	401
13.7	Excited-Level Shift	402
13.7.1	Classical Antenna Behavior	403
13.8	Power–Zienau Transformation in Half-Space	404
13.9	Calculation in the Coulomb Gauge	408
13.10	Evaluation	411
13.11	Numerical Evaluation: ^{87}Rb	411
13.11.1	Tabulated Data	413
13.11.2	Results	414
13.12	Lamb Shift	417
13.12.1	Coulomb Gauge	417
13.12.1.1	Evaluation	420

13.12.2 Electric Dipole Interaction	421
13.12.2.1 Dipole Self-Energy	421
13.12.2.2 Mass Renormalization	422
13.13 Exercises	424
14 QED with Dielectric Media	427
14.1 Classical Electrodynamics in Dielectric Media	427
14.1.1 Effective Sources	427
14.1.2 Linear, Dispersive Media	428
14.1.2.1 Frequency Domain	428
14.1.2.2 Time Domain	429
14.1.3 Classical Green Tensor	429
14.1.3.1 Example: Green Tensor in Free Space	431
14.1.3.2 Green Tensor in Free Space: Alternate Forms	432
14.1.3.3 Derivation of the Formula for the Dipole Radiation Field	433
14.1.4 Permittivity Properties	434
14.1.4.1 Energy Loss and Poynting's Theorem	435
14.1.4.2 Kramers–Kronig Relations	436
14.1.4.3 Imaginary Frequencies	439
14.2 Generalized Susceptibility and Linear-Response Theory	440
14.2.1 Proof	440
14.2.2 Atom and Field Susceptibilities	442
14.3 Atom–Surface Potentials Near Dielectric Media	443
14.3.1 Kramers–Heisenberg Formula	444
14.3.2 Green Tensor	446
14.3.2.1 Mode Expansion of the Green Tensor	446
14.3.3 Interaction Energy	447
14.3.4 Renormalization	448
14.3.5 Planar Interface	448
14.3.5.1 Reflection Coefficients	449
14.3.5.2 Scattering Green Tensor Due to the Planar Interface	450
14.3.5.3 Explicit Expressions for the Atom–Surface Potential	451
14.3.5.4 Perfect-Conductor Limit	451
14.3.5.5 Near-Field Limit	452
14.3.5.6 Far-Field Limit	454
14.3.5.7 Dielectric Thin Films	456
14.3.5.8 Metallic Thin Films	457
14.3.6 Perfectly Conducting, Spherical Cavity	459
14.3.7 Ground-State Atom–Atom Potentials	460
14.3.7.1 Near-Field van der Waals–London Potential	461
14.3.7.2 Far-Field Potential	462
14.3.7.3 General Form for Scalar Polarizabilities	463
14.3.8 Temperature Dependence	464
14.3.8.1 Fluctuation–Dissipation Relation	464
14.3.8.2 Fluctuation–Dissipation Example: Johnson Noise	467
14.3.8.3 Temperature-Dependent Shifts	468
14.3.8.4 Imaginary Time and the Low-Temperature Limit	471
14.3.8.5 High-Temperature Limit	472
14.3.8.6 Planar Boundaries at Nonzero Temperature	472
14.3.9 Excited-Level Shifts	474
14.3.9.1 Example: Spherically Symmetric Atom, Perfectly Conducting Plane	476
14.3.10 Lifetime Shifts	477
14.3.10.1 Decay Rate Near a Macroscopic Body	477

14.3.10.2 Free Space: Green-Tensor Example	479
14.3.10.3 Planar Reflector	480
14.4 Exercises	481

III Quantum Measurement and Stochastic Evolution 485

15 Stochastic Processes 487

15.1 Wiener Process	487
15.2 Itô Calculus	489
15.2.1 Usage	489
15.2.2 Itô Rule: Justification	490
15.2.3 Ensemble Averages	491
15.2.4 Correlation Function	491
15.2.5 Diffusion	492
15.2.5.1 Fokker–Planck Equation	493
15.2.6 Ornstein–Uhlenbeck Process	494
15.2.6.1 Brownian Motion	495
15.3 Stratonovich Calculus	496
15.3.1 Example: Stochastic Integration	497
15.3.2 Itô–Stratonovich Conversion	499
15.3.3 Stratonovich Calculus and the Chain Rule	500
15.3.4 Comparison	500
15.4 Poisson Process	501
15.4.1 The Poisson Process Implies the Poisson Distribution	503
15.4.2 Non-Homogeneous Poisson Process	503
15.4.3 White-Noise Limit	504
15.4.3.1 Shot Noise	504
15.5 Exercises	507

16 Quantum Trajectories for Photodetection 509

16.1 Quantum Jumps and the Poisson Process	509
16.1.1 Ensemble Average	511
16.1.2 Quantum Trajectories and the Stochastic Schrödinger Equation	511
16.1.3 Information Gain	512
16.1.4 Monte Carlo Trajectories	512
16.1.5 Detector Efficiency	514
16.2 Homodyne Detection	515
16.2.1 State Collapse	517
16.2.2 Quantum-State Diffusion	517
16.2.3 Measurement Record	520
16.2.4 Information Gain from the Measurement Record	521
16.2.5 Diffusion Form of the Stochastic Schrödinger Equation	522
16.2.6 Balanced Homodyne Detection	522
16.2.6.1 Master Equation	524
16.2.6.2 Measurement Record	526
16.2.7 Heterodyne Detection	527
16.2.8 Detector Efficiency and Multiple Observers	528
16.3 Conditioned Dynamics and Squeezing	530
16.3.1 Moment Equations	531
16.3.2 Quadrature Moments	532
16.3.3 Interpretation	532
16.3.4 Squeezing (or Lack Thereof)	533

16.3.5	Homodyne Detection	534
16.3.6	Heterodyne Detection	534
16.3.7	Explicit Solutions for the Uncertainty Dynamics	536
16.3.8	Phase Estimation	536
16.3.8.1	Adaptive Measurements	538
16.4	Exercises	539
17	Position Measurement	541
17.1	Prelude: General Form for the Master Equation	541
17.1.1	Positive Maps	541
17.1.2	Lindblad Form	542
17.1.3	Stochastic Terms	543
17.1.4	Generalization	543
17.2	A Second Prelude: Positive Operator-Valued Measures	544
17.2.1	Discrete, Finite Spaces	544
17.2.2	Measure	545
17.2.3	General Definition	547
17.2.4	Realization	547
17.2.5	Example: Spontaneous Emission	548
17.2.6	Example: Gaussian Projectors	549
17.3	Continuous Position Measurement	550
17.3.1	State Collapse and the Stochastic Schrödinger Equation	551
17.3.1.1	Gaussian Noise	553
17.3.2	Stochastic Master Equation	553
17.3.3	Inefficient Detection and Multiple Observers	554
17.3.4	Interpretation	555
17.3.5	Linear Stochastic Evolution Equations	557
17.3.5.1	Norm of the Linear Solution	558
17.3.5.2	Interpretation of the Solution	558
17.3.5.3	Explicit Solutions of Measurement Dynamics	559
17.4	Imaged Resonance Fluorescence as a Position Measurement	560
17.4.1	Center-of-Mass Dynamics	560
17.4.2	Imaging	562
17.4.2.1	Example: 4π Detection	565
17.4.2.2	Example: Small Gaussian Aperture	565
17.4.3	Adiabatic Elimination of the Internal Atomic State	566
17.4.3.1	Internal Quasi-Equilibrium	567
17.4.3.2	External Master Equation	567
17.4.4	White-Noise Limit: Gaussian Aperture	569
17.4.4.1	Spatial Continuum Approximation	569
17.4.4.2	Quantum-State Diffusion	570
17.4.4.3	Diffusion Rates	570
17.5	Position Measurement via Excitation by a Local Probe Field	571
17.5.1	Localized Probe Field	571
17.5.2	Scanning Probe Field	573
17.5.3	Example: Gaussian Probe	574
17.6	Continuous Momentum Measurement by EIT	574
17.6.1	General Remarks	575
17.6.2	Homodyne Detection of the EIT Probe	575
17.6.3	Adiabatic Approximation	576
17.6.4	Spontaneous Scattering	577
17.6.5	Phase	578
17.6.6	Detection Efficiency	578

IV Numerical Methods in Quantum Optics	581
18 Welcome to the Machine	583
18.1 Finite Representations of Real Numbers	583
18.2 Machine Structure and Optimization	584
18.2.1 Memory Hierarchy	584
18.2.2 Pipeline	587
18.2.2.1 Out-of-Order Execution	588
18.2.2.2 Loop Unrolling	588
18.2.2.3 Branch Prediction	589
18.2.2.4 Addition, Multiplication, and Division	590
18.2.3 Avoiding Overhead	591
18.2.3.1 Procedure Inlining	591
18.2.3.2 Compiler Issues	591
18.2.4 Parallel Programming	592
18.2.5 Tuning Your Code	592
19 Ordinary Differential Equations	595
19.1 Convergence	595
19.1.1 Sequences	595
19.1.2 O and o	595
19.1.2.1 Example	596
19.1.3 Convergence and Scaling of Functions	596
19.1.3.1 Truncation Error	596
19.1.3.2 Example	597
19.2 Euler Methods	597
19.2.1 Local and Global Truncation Error	597
19.2.2 Implicit Euler Method and Stiff Equations	598
19.3 Runge–Kutta Methods	599
19.3.1 Second-Order Methods	599
19.3.1.1 Variations	600
19.3.2 Fourth-Order and General Schemes	601
19.3.3 Implicit Runge–Kutta Methods	603
19.3.4 Adaptive Stepping	604
19.4 Multistep and Predictor–Corrector Methods	605
19.5 Exercises	606
20 Fourier Transforms	607
20.1 Sampling Theorem	607
20.1.1 Critical Sampling	608
20.1.2 Reconstruction	609
20.2 Discrete Fourier Transform	610
20.2.1 Periodicity and Transform Ordering	612
20.3 Aliasing	612
20.4 Fast Fourier Transform	613
20.5 Conventions	614
20.5.1 Temporal Signals	614
20.5.2 Temporal Correlation Functions	615
20.5.3 Standard Frequency	616
20.5.4 Wave Functions	617
20.6 Discrete Wigner Transform	618
21 Split-Operator Methods	621

21.1	Splitting the Unitary Evolution Operator	621
21.2	Time-Dependent Potentials	623
21.3	Richardson Extrapolation	624
21.3.1	Numerical Test	625
21.4	Unitary Evolvers	626
21.4.1	Hierarchical Construction	626
21.4.1.1	High-Order Methods with Reduced Substep Intervals	628
21.4.1.2	High-Order Minimal-Product Methods	629
21.4.1.3	High-Order Treatment of Time-Dependent Potentials	630
21.4.1.4	Numerical Test: Fourth Order	630
21.4.1.5	Numerical Test: Sixth Order	631
21.4.2	Nonlinear Schrödinger Equations	632
21.4.3	Symplectic Integration	633
21.4.3.1	Euler–Cromer Method	634
21.4.3.2	Verlet Method	635
21.4.3.3	Higher Order Methods	636
21.4.3.4	Time-Dependent Potentials	637
21.5	Exercises	638
22	Stochastic Differential Equations	639
22.1	Stochastic Euler Method	639
22.2	Milstein Method	639
22.3	Stochastic Taylor Expansion	639
22.4	Runge–Kutta Methods	639
22.5	Random Numbers	639
22.5.1	Uniform Distribution	639
22.5.2	Gaussian Distribution	639
22.5.3	Angular Distributions	639
